

FR0010147603

Monthly Factsheet - 28/03/2024

## INVESTMENT OBJECTIVE

Feeder fund of international equity fund Carmignac Investissement. Through the use of derivatives, the Fund Manager is free to adjust the fund's exposure to Carmignac Investissement's equity risk from anywhere between 0% and 100%. The Fund combines strong convictions on global equities and expertise in managing market risk exposure. The Fund aims to outperform its reference indicator over a recommended investment horizon of 5 years.

Fund Management analysis can be found on P.4

## PERFORMANCE

Past performance is not necessarily indicative of future performance. Performances are net of fees (excluding possible entrance fees charged by the distributor).

## PORTFOLIO ESG SUMMARY

This financial product is an Article 8 fund of the Sustainable Finance Disclosure Regulation (“SFDR”). The binding element of the fund's investment strategy is to invest at least 85% of its net assets in A EUR Acc units of the Master Fund. The binding elements of the investment strategy used by the Master Fund are :

- At least 50% of the fund's net assets are invested in the equities of companies deriving at least 50% of their revenue from goods or services linked to business activities that positively align with at least one of the 9 United Nations Sustainable Development Goals out of 17, or investing at least 50% of their CapEx in such activities;
- The minimum levels of sustainable investments with environmental and social objectives are 5% and 15% of the fund's net assets, respectively;
- The equity and corporate bond universe is actively reduced by at least 20%;
- ESG analysis is applied to at least 90% of securities (excluding cash and derivatives);
- Carbon emissions, as measured by carbon intensity, are 30% lower than those of their reference benchmark.

### PORTFOLIO ESG COVERAGE

### CARBON EMISSION INTENSITY (T CO2E/USD MN REVENUES) converted to Euro

Source: S&P Trucost, 28/03/2024. The reference indicator of each Fund is hypothetically invested with identical assets under management as the respective Carmignac equity funds and calculated for total carbon emissions and per million Euro of revenues.

**Carbon emissions figures** are based on S&P Trucost data. The analysis is conducted using estimated or declared data measuring Scope 1 and Scope 2 carbon emissions, excluding cash and holdings for which carbon emissions are not available. To determine carbon intensity, the amount of carbon emissions in tonnes of CO<sub>2</sub> is calculated and expressed per million dollar of revenues (converted to Euro). This is a normalized measure of a portfolio's contribution to climate change that enables comparisons with a reference indicator, between multiple portfolios and over time, regardless of portfolio size.

Please refer to the glossary for more information on the calculation methodology

## FUND MANAGEMENT ANALYSIS

### MARKET ENVIRONMENT

US data continues to reflect a degree of economic resilience, with inflation figures still high. However, the disinflation trend continues in Europe. In the light of this, the Fed and the ECB are sticking to their plan and will probably start cutting interest rates this summer. This backdrop of robust growth, persistent inflation and more accommodative central banks is keeping the risky asset rally alive. Stock market indices rose further in March, with global equities enjoying their longest stretch of positive monthly performances since 2021. Fortunes were fairly consistent between the various regions. Energy and materials were the best performing sectors as commodity prices climbed. Oil was up 5% to \$87 a barrel (Brent), while gold set a new record of more than \$2,200 an ounce. The technology and consumer sectors fared worse, even if they did end the month higher. Stock markets remain on the up because they are still expecting the Fed to cut interest rates and the economy to land softly, which is good news for corporate earnings.

### PERFORMANCE COMMENTARY

The Fund ended March with a gain of more than 4%, beating its reference indicator. Once again, semiconductor stocks benefited from AI and its growth prospects. This month it was Micron Technology that gave the market a pleasant surprise, announcing much better-than-expected results. These support our investment case, namely that the industry is gradually reaching a mismatch between supply and demand. The only blot on the copybook was AMD, which suffered from the Chinese government's recent decisions aimed at prioritising Chinese microchips. Away from semiconductors, Airbus performed well in industrials, as did Lonza in healthcare. Our portfolio of healthcare stocks also raised performance as Novo Nordisk, a leader on the blossoming market for obesity treatments, climbed ever higher. Our equity hedges were somewhat disappointing in March.

### OUTLOOK AND INVESTMENT STRATEGY

The combination of slower but firmer economic growth and more accommodative central banks should keep macroeconomic conditions favourable for equities. However, although financial markets are not showing any signs of exuberance, this scenario has already been priced in, with most indices reaching all-time highs. Regular profit-taking and selectivity are therefore essential. Although we remain optimistic for the AI and obesity treatment themes, we are strengthening positions on laggards and diversifying through the industrial sector in particular. These laggards include chip maker TSMC, which supplies Apple and NVIDIA and is therefore benefiting from the frenzy surrounding AI. We also remain convinced about Hermès, which should post double-digit sales growth again this year and beat its rivals, as its high-end positioning gives the company pricing power and leads to higher volumes being sold. Kristofer Barrett will take over the Carmignac Investissement strategy on 8 April 2024. With a proven investment approach that combines bottom-up research with pragmatic macroeconomic analysis, Kristofer has delivered exceptional results over the long term. The investment philosophy will remain true to that behind Carmignac Investissement's 35 years of success.

## GLOSSARY

**Alpha:** Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

**Beta:** Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund “cushions” the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund “magnifies” the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

**Capitalisation:** A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

**FCP:** Fonds commun de placement (French common fund).

**Investment grade:** A loan or bond that rating agencies have rated AAA to BBB-, generally indicating relatively low default risk.

**Investment/net exposure rate:** The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the net exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

**Modified duration:** A bond's modified duration measures the risk attached to a given change in the interest rate. Modified duration of +2 means that for an instantaneous 1% rate increase, the portfolio's value would drop by 2%.

**Net asset value:** Price of all units (in an FCP) or shares (in a SICAV).

**Rating:** The rating measures the creditworthiness of a borrower (bond issuer).

**Sharpe ratio:** The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

**SICAV:** Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

**VaR:** Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

**Volatility:** Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

## ESG DEFINITIONS & METHODOLOGY

**ESG:** E for Environment, S for Social, G for Governance

**ESG score Calculation:** Only the Equity and Corporate Bond holdings of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see “MSCI ESG Fund Ratings Methodology”, Section 2.3. Updated June 2021. <https://www.msci.com/documents/1296102/15388113/MSCI+ESG+Fund+Ratings+Exec+Summary+Methodology.pdf/ec622acc-42a7-158f-6a47-ed7aa4503d4f?t=1562690846881>.

**Principal Adverse Impacts (PAI):** Negative, material, or potentially material effects on sustainability factors that result from, worsen, or are directly related to investment choices or advice performed by a legal entity. Examples include GHG emissions and carbon footprint.

**S&P Trucost methodology:** Trucost uses company disclosed emissions where available. In the instance it is not available, they use their proprietary EEIO model. The model uses the revenue breakdown of the company by industry sector to estimate the carbon emissions. For further information, please visit: [www.spglobal.com/spdji/en/documents/additional-material/faq-trucost.pdf](http://www.spglobal.com/spdji/en/documents/additional-material/faq-trucost.pdf). Although S&P Trucost does report Scope 3 emissions where available, such emissions are commonly considered to be poorly defined and inconsistently calculated by companies. As a result, we have chosen not to include them in our portfolio emission calculations.

To calculate the portfolio carbon emissions, the companies' carbon intensities (tonnes of CO<sub>2</sub>e /USD mn revenues) are weighted according to their portfolio weightings (normalized for holdings for which carbon emissions are not available), and then summed.

**Scope 1:** Greenhouse gas emissions generated from burning fossil fuels and production processes which are owned or controlled by the company.

**Scope 2:** Greenhouse gas emissions from consumption of purchased electricity, heat or steam by the company.

**Scope 3:** Other indirect Greenhouse gas emissions, such as from the extraction and production of purchased materials and fuels, transport-related activities in vehicles not owned or controlled by the reporting entity, electricity-related activities (e.g. T&D losses) not covered in Scope 2, outsourced activities, waste disposal, etc.

**SFDR Articles - Fund Classification:** Sustainable Finance Disclosure Regulation, an EU Act that requires asset managers to classify funds into categories: “Article 8” funds promote environmental and social characteristics, “Article 9” funds have sustainable investments as a measurable objective.

**Sustainable Investments:** The SFDR defines sustainable investment as an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

**Taxonomy Alignment:** In the context of an individual company, taxonomy alignment is defined as the proportion of a company's revenue that comes from activities that meet certain environmental criteria. In the context of an individual fund or portfolio, alignment is defined as the portfolio-weight weighted average taxonomy alignment of included companies. For more information, please follow this link: [https://ec.europa.eu/info/sites/default/files/business\\_economy\\_euro/banking\\_and\\_finance/documents/sustainable-finance-taxonomy-faq\\_en.pdf](https://ec.europa.eu/info/sites/default/files/business_economy_euro/banking_and_finance/documents/sustainable-finance-taxonomy-faq_en.pdf)

## MAIN RISKS OF THE FUND

**EQUITY:** The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization.

**INTEREST RATE:** Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **CURRENCY:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments. **DISCRETIONARY**

**MANAGEMENT:** Anticipations of financial market changes made by the Management Company have a direct effect on the Fund's performance, which depends on the stocks selected.

**The Fund presents a risk of loss of capital.**
