

Carmignac Portfolio Investissement A EUR Acc

Luxembourg SICAV sub-fund

D. Older

FACT SHEET
12/2021

Recommended minimum investment horizon:

5 years

Investment Objective

International equity fund which benefits from our macro-economic expertise, active management and unconstrained asset allocation in terms of sectors, geographical areas and market capitalisations. The Fund aims to outperform its reference indicator over a minimum of 5 years. At least 60% of net assets are permanently exposed to equity markets. The Fund's main performance drivers are therefore equities but also currencies and occasionally fixed income products.

Fund Management analysis can be found on P.4

PORTFOLIO ESG SUMMARY

ESG Score - Portfolio ESG Coverage: 93.6%

Carmignac Portfolio Investissement A EUR Acc	Reference Indicator*
A	A

Source MSCI ESG

MSCI ESG Score Portfolio vs Reference Indicator

Source: MSCI ESG Score. ESG Leaders represent companies rated AAA and AA by MSCI. ESG Average represent companies rated A, BBB, and BB by MSCI. ESG Laggards represent companies rated B and CCC by MSCI.

Carbon Emission Intensity (T CO2E/USD mn Revenues) converted to Euro

Source: S&P Trucost, 31/12/21. The reference indicator of each Fund is hypothetically invested with identical assets under management as the respective Carmignac equity funds and calculated for total carbon emissions and per million Euro of revenues.

Carbon emission figures are based on S&P Trucost data. The analysis is conducted using estimated or declared data measuring Scope 1 and Scope 2 carbon emissions, excluding cash and holdings for which carbon emissions are not available. To determine carbon intensity, the amount of carbon emissions in tonnes of CO₂ is calculated and expressed per million dollar of revenues (converted to Euro). This is a normalized measure of a portfolio's contribution to climate change that enables comparisons with a reference indicator, between multiple portfolios and over time, regardless of portfolio size.

Please refer to the glossary for more information on the calculation methodology

MARKETING COMMUNICATION

FUND MANAGEMENT ANALYSIS

Market environment

Equity markets made further progress in December to end the year on a high note. However, as in recent months, investors saw big contrasts between and within the different sectors and regions. Europe and the United States led the way, mainly through energy and materials, as commodity prices rose. Biotech and software stocks were down. Chinese markets also fell as the People's Bank of China hinted that it may be more accommodative in its approach, while being cautious about the overall level of leverage in the economy. More globally as the year drew to a close, the markets adjusted to a new macroeconomic situation containing the early signs that extraordinary US monetary stimulus will be scaled back, with inflation higher and growth slower.

Performance commentary

Our positioning on innovative secular growth companies means we are particularly exposed to segments of the market that fell over the period. Our biotech and software names, such as Wuxi Biologics, Biontech and Salesforce, were down. More generally, some innovative companies having decent growth but not yet showing high profitability, including certain fintechs (Adyen, Block), were punished. Temporarily, it may be hard for investors to assess the potential growth of a company – as innovative and promising as it may be – when inflation is rising, and central banks are reducing their monetary stimulus. Our Chinese exposure, which is also based around innovative growth companies, weighed on performance too.

Outlook and Investment strategy

Although we think that the global economy will continue to reopen in 2022, growth will probably slow over the year. Not only is the cycle maturing, but the global economy is facing a number of headwinds (rise in commodity prices, liquidity squeeze on both emerging and developed markets, less generous fiscal stimulus). Against this backdrop, we adjusted the portfolio by closing positions in certain rapidly growing but highly priced companies, in favour of more defensive names, especially in healthcare (Pfizer, Astrazeneca, Danaher) and consumer staples (Diageo, Constellation Brands). Overall, we are keeping a liquid portfolio of investments based on strong convictions about innovation, diversified across regions and sectors, and fitting in with our disruption themes. These include artificial intelligence, the cloud, big data, digitalisation, the metaverse, biotechnology, electrification and renewable energy.

GLOSSARY

Alpha: Alpha measures the performance of a portfolio compared to its reference indicator. Negative alpha means the fund performed less well than its reference indicator (e.g. if the indicator increased by 10% in one year and the fund increased by only 6%, its alpha is -4). Positive alpha means the fund performed better than its reference indicator (e.g. if the indicator increased by 6% in one year and the fund increased by 10%, its alpha is 4).

Beta: Beta measures the relationship between the fluctuations of the net asset values of the fund and the fluctuations of the levels of its reference indicator. Beta of less than 1 indicates that the fund "cushions" the fluctuations of its index (beta = 0.6 means that the fund increases by 6% if the index increases by 10% and decreases by 6% if the index falls by 10%). Beta higher than 1 indicates that the fund "magnifies" the fluctuations of its reference indicator (beta = 1.4 means that the fund increases by 14% when the index increases by 10% but also decreases by 14% when the index decreases by 10%). Beta of less than 0 indicates that the fund reacts inversely to the fluctuations of its reference indicator (beta = -0.6 means that the fund falls by 6% when the index increases by 10% and vice versa).

Capitalisation: A company's stock market value at any given moment. It is obtained by multiplying the number of shares of a company by its stock exchange price.

ESG: E for Environment, S for Social, G for Governance

ESG score Calculation: Only the Equity portion of the fund considered. Overall Fund Rating calculated using MSCI Fund ESG Quality Score methodology: excluding cash and non ESG-rated holdings, performing a weighted average of the normalized weights of the holdings and the Industry-Adjusted Score of the holdings, multiplied by (1+Adjustment%) which consists of the weight of positively trending ESG ratings minus the weight of ESG Laggards minus the weight of negatively trending ESG ratings. For a detailed explanation see "MSCI ESG Fund Ratings Methodology", Section 2.3. Updated April 2020.

<https://www.msci.com/documents/1296102/15388113/MSCI+ESG+Fund+Ratings+Exec+Summary+Methodology.pdf/ec622acc-42a7-158f-6a47-ed7aa4503d4f?t=1562690846881>.

FCP: Fonds commun de placement (French common fund).

Investment/exposure rate: The investment rate constitutes the volume of assets invested expressed as a percentage of the portfolio. Adding the impact of the derivatives to this investment rate results in the exposure rate, which corresponds to the real percentage of asset exposure to a certain risk. Derivatives can be used to increase the underlying asset's exposure (stimulation) or reduce it (hedging).

Net asset value: Price of all units (in an FCP) or shares (in a SICAV).

Rating: The rating measures the creditworthiness of a borrower (bond issuer). Ratings are published by rating agencies and offer the investor reliable information on the risk profile associated with a debt security.

S&P Trucost methodology: Trucost uses company disclosed emissions where available. In the instance it is not available, they use their proprietary EEIO model. The model uses the revenue breakdown of the company by industry sector to estimate the carbon emissions. For further information, please visit: www.spglobal.com/spdji/en/documents/additional-material/faq-trucost.pdf. Although S&P Trucost does report Scope 3 emissions where available, such emissions are commonly considered to be poorly defined and inconsistently calculated by companies. As a result, we have chosen not to include them in our portfolio emission calculations. To calculate the portfolio carbon emissions, the companies' carbon intensities (tonnes of CO₂e /USD mn revenues) are weighted according to their portfolio weightings (adjusted for holdings for which carbon emissions are not available), and then summed.

Scope 1: Greenhouse gas emissions generated from burning fossil fuels and production processes which are owned or controlled by the company.

Scope 2: Greenhouse gas emissions from consumption of purchased electricity, heat or steam by the company.

Scope 3: Other indirect Greenhouse gas emissions, such as from the extraction and production of purchased materials and fuels, transport-related activities in vehicles not owned or controlled by the reporting entity, electricity-related activities (e.g. T&D losses) not covered in Scope 2, outsourced activities, waste disposal, etc.

Sharpe ratio: The Sharpe ratio measures the excess return over the risk-free rate divided by the standard deviation of this return. It thus shows the marginal return per unit of risk. When it is positive, the higher the Sharpe ratio, the more risk-taking is rewarded. A negative Sharpe ratio does not necessarily mean that the portfolio posted a negative performance, but rather that it performed worse than a risk-free investment.

SICAV: Société d'Investissement à Capital Variable (Open-ended investment company with variable capital)

VaR: Value at Risk (VaR) represents an investor's maximum potential loss on the value of a financial asset portfolio, based on a holding period (20 days) and confidence interval (99%). This potential loss is expressed as a percentage of the portfolio's total assets. It is calculated on the basis of a sample of historical data (over a two-year period).

Volatility: Range of price variation of a security, fund, market or index, which enables the measurement of risk over a given period. It is determined using the standard deviation obtained by calculating the square root of the variance. The variance is obtained by calculating the average deviation from the mean, which is then squared. The greater the volatility, the greater the risk.

Main risks of the fund

Equity: The Fund may be affected by stock price variations, the scale of which is dependent on external factors, stock trading volumes or market capitalization. **Currency:** Currency risk is linked to exposure to a currency other than the Fund's valuation currency, either through direct investment or the use of forward financial instruments. **Interest rate:** Interest rate risk results in a decline in the net asset value in the event of changes in interest rates. **Discretionary management:** Anticipations of financial market changes made by the Management Company have a direct effect on the Fund's performance, which depends on the stocks selected. The Fund presents a risk of loss of capital.
